About the Journal

The Journal of Informatics and Web Engineering (JIWE) is a peer-reviewed journal that advances the engineering of user-centric, web-native information systems. We published original research, reviews, and case studies that unite informatics with rigorous web-engineering methods across the full lifecycle, from requirements and design to deployment and evolution. Priority areas include web engineering and applied informatics, artificial intelligence or machine learning on the web, cybersecurity, privacy, trust, and emerging digital technologies such as IoT, blockchain, big data, and visual analytics. Submissions must demonstrate methodological rigor, empirical evaluation, and clear relevance to the engineering of web systems.

Our mission was to foster a community of researchers and practitioners committed to building reliable, scalable, and secure web applications with demonstrable real-world impacts.
